NGUYEN TIEN DUNG

IT BUSINESS ANALYST (INTERN / FRESHER FULL-TIME)

Hanoi, Vietnam | (+84) 363 262 292 | tiendunga2k13@gmail.com
Portfolio | Notion

PROFESSIONAL SUMMARY

Software Engineering student at FPT University seeking an **IT Business Analyst (Intern / Fresher Full-time)** role. Practical academic project experience in business process modeling (BPMN 2.0), authoring standardized SRS specifications, decomposing requirements into User Stories with testable Acceptance Criteria (Gherkin format), and resolving complex business rules/edge cases. Technical foundation (SQL, REST APIs) bridging business requirements with engineering implementation.

EDUCATION

FPT University 2023 – Present
Software Engineering – **Final-year Student** | GPA: **3.0 / 4.0** (Expected Graduation: 2027)

- Awarded **30% Academic Merit Scholarship** for the entire 4-year undergraduate program.

FEATURED PROJECTS

Kidpro – Smart Preschool Management System & AI Face Attendance / *Graduation Capstone Project* 09/2026 – Present
Process Analysis / *User Stories & Acceptance Criteria* / *BPMN* / *Wireframing* / *Jira* / **View Case Study**

- Analyzed 5 core preschool operational workflows and authored standardized SRS documentation; translated requirements into User Stories with testable Given-When-Then Acceptance Criteria to support development and requirements validation.
- Defined package-based meal-fee deduction rules with 07:00 and 08:30 cutoffs, and specified offline exception-handling requirements to support accurate attendance records and meal-fee adjustments during network disruptions.
- Specified attendance workflows with a manual verification fallback for low-confidence face recognition results, and modeled guardian pickup authorization and late-pickup fee rules to address identification failures and operational exceptions.
- Designed interactive Figma prototypes to clarify functional UI flows across 7 user roles; documented functional requirements and business rules, and organized requirement-related tasks and issues in Jira.

Hospital Management System (HMS) / *COURSE PROJECT REPORT* 01/2026 – 03/2026
Requirements Analysis / *Business Rules* / *UML* / *SOA Architecture* / **View Case Study**

- Analyzed inpatient and outpatient clinical workflows including patient intake, appointment scheduling, Electronic Medical Records (EMR), prescription fulfillment, and hospital billing.
- Defined business rules for role-based access control (RBAC) and clinical prescription safety controls; modeled inter-departmental interactions using UML diagrams (Use Case, Activity, Sequence) to clarify actor permissions and system behavior.
- Proposed a Service-Oriented Architecture (SOA) design to decouple core functional subsystems under supervisor guidance; collaborated in verifying end-to-end consistency between system specifications and clinical requirements.

SKILLS

Business Analysis: Requirements Elicitation & Analysis, Functional/Non-functional Requirements, User Stories, Acceptance Criteria, Business Rules, UAT.

Process & System Modeling: BPMN, UML, Wireframing & Prototyping.

Technical: SQL Server, REST API Fundamentals, Postman.

Tools: Jira, Figma, Draw.io, Visual Paradigm, Git/GitHub, Notion, MS Office, Teams.

AI-Assisted Analysis: Claude AI, Stitch AI — requirements documentation and wireframe drafting support.

LANGUAGES & CERTIFICATIONS

Languages: English: IELTS 5.0 (2023-2025)
